

# UBio-Sync Access Control & AEOS Integration

## Creating Synergy through Seamless Integration

The integration between Nedap and UNIONCOMMUNITY allows users to effectively register biometric information through the AEOS system. UBio-Sync, the middleware facilitates effective biometric synchronization between the terminal and AEOS server.

### Easy Biometric Enrollment

Easy biometric enrollment via AEOS web, enhancing access control experience

### Data Synchronization

UBio-Sync, a middleware, enables fast and effective synchronization of biometric data between the AEOS server and a compatible access control device.

### User Friendly

Provide a single interface where users can effectively check authentication logs within AEOS system

### Data Protection

Ensure all biometric data is encrypted while being transferred and stored within the access control device

### For Successful Implementation:

- Solution Name: UBio-Sync Access Control & AEOS Integration
- Operating Settings: Microsoft Window 10 or above
- AEOS Server Version: AEOS 2022.2.3 and higher
- UBio-Sync Version: v1.0.0
- Compatible Access Control Terminals: UBio Series
