UBio-Core

Experience the New

Video Intercom

Integrating the video intercom feature into access control systems

Video Intercom

Visitor	Administrator

Easy Installation of Video Intercom

Providing video intercom system without additional device installation requirements

Two-Way Video Calling Service

Enable video calls to administrator's PC via direct communication with all access control terminals
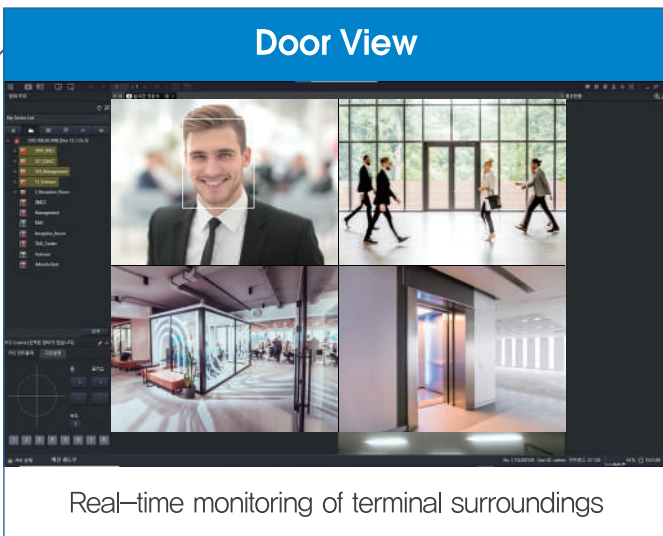

Efficient Access Door Management

Remotely verify visitor identities and authorize door access.

Authorized personnel

Unauthorized Personnel

UBio–Core collects and analyzes various data to generate innovative value. We redefine value solely through firmware updates to existing access control terminals

Multi View

Incorporating video surveillance feature into the access control system.

Door View

Real–time monitoring of terminal surroundings

Easy Installation of Video Surveillance System

Providing video surveillance system at entry point without additional CCTV camera installation requirements
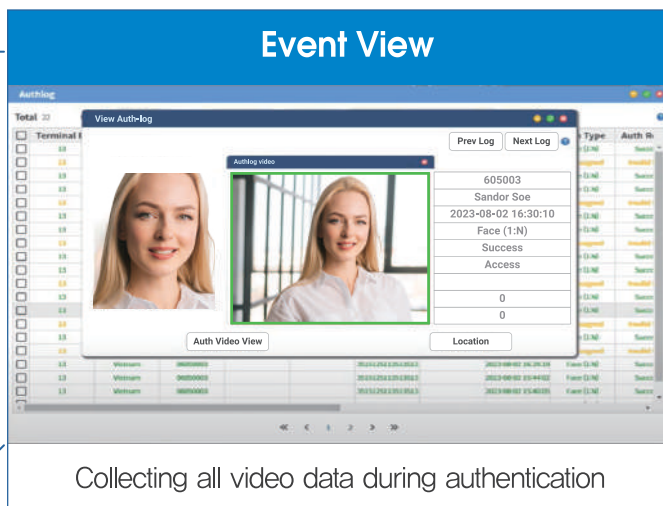

Eliminating Blind Spots

Providing security without blind spots by monitoring the front facing video of access control terminals in real–time

Centralized Management

Up to 2,000 devices can be connected for integrated monitoring

Event View

Collecting all video data during authentication

Intuitive Authentication Log Management

Authentication data is provided in a single interface for efficient management.

Text Data	Video Data
Auth Result / Terminal User Name / Auth Type / Time	Auth Image / Auth Video

Prompt Incident Response

Collecting video data for 6 seconds from authentication attempts enables prompt identification and response to security incidents
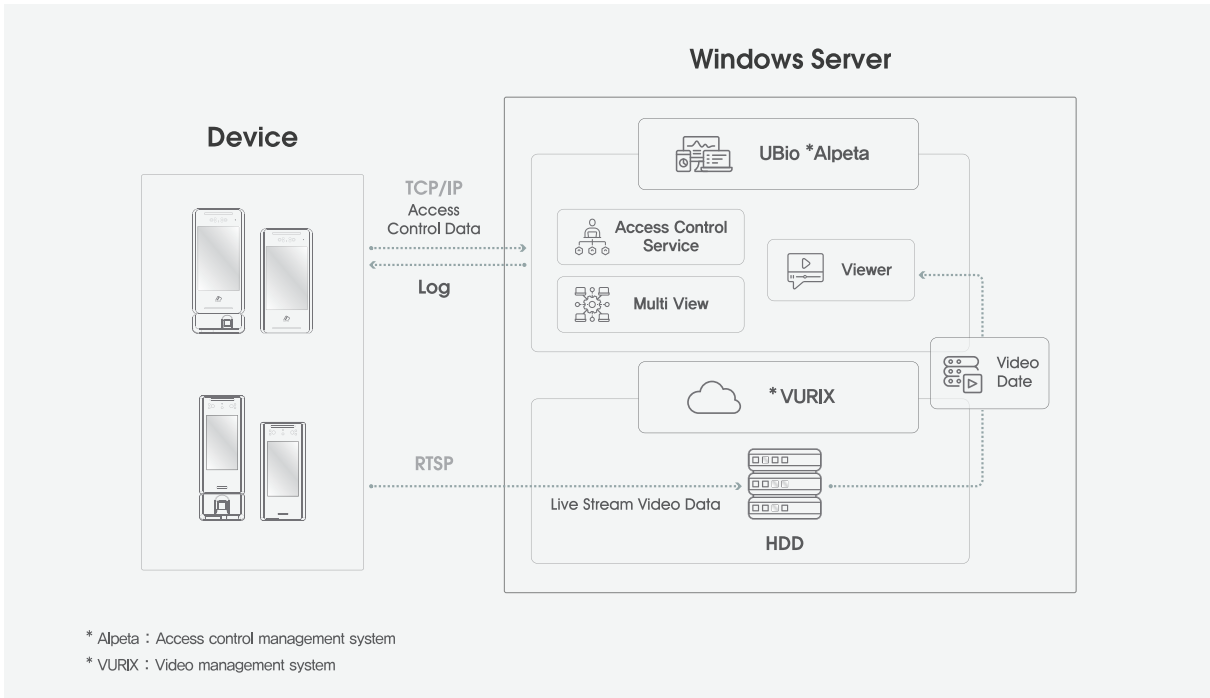

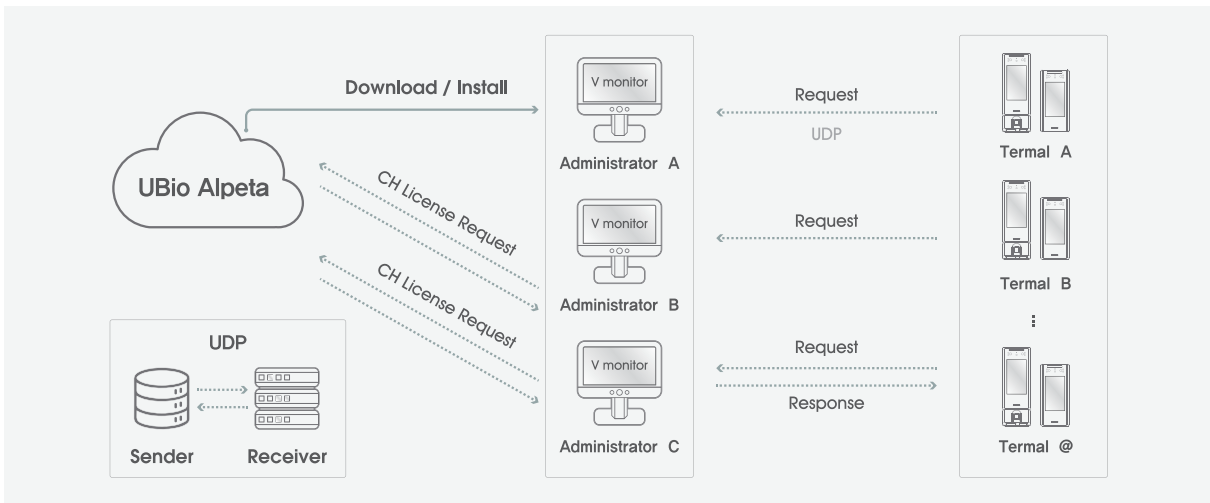

Efficient and Precise Log Management

Ability to monitor user authentication video logs for desired timelines.

Advanced security and operational efficiency through centralized security management.
